TITLE	Molecular landscape in colorectal cancer.				
PROF	Erika Martinelli				
SSD	MEDS-09/A				
GENERAL AND SPECIFIC OBJECTIVES	Colorectal cancer (CRC) is one of the most common malignancies in Western countries. Over the last 20 years, and the last decade in particular, the clinical outcome for patients with metastatic CRC (mCRC) has improved greatly due not only to an increase in the number of patients being referred for and undergoing surgical resection of their localized metastatic disease but also to a more strategic approach to the delivery of systemic therapy and an expansion in the use of ablative techniques. This reflects the increase in the number of patients that are being managed within a multidisciplinary team environment and specialist cancer centers, and the emergence over the same time period not only of improved imaging techniques but also prognostic and predictive molecular markers. Treatment decisions for patients with mCRC must be evidence- based.

◆ ACADEMIC YEAR	2024/2025				
◆ MAXIMUM N. OF STUDENTS	20				
◆ STUDENT COURSE YEAR	IV - V - VI				
◆ BASIC KNOWLEDGE REQUESTED	Haematology and oncology is required				
◆ LOCATION	Booked students will be notified				
◆ DATE (S) AND TIME	From February 04 <sup>th</sup> , 2025				
◆ CONTACTS	erika.martinelli@unicampania.it				

Booking deadline January 31<sup>st</sup>, 2025
